addagrip DECO

The Addatex Stone Carpet & Addagrip DECO systems are formulations of resin bound natural and coloured aggregates to provide attractive, hard wearing and low maintenance surfaces.

addagrip

“Addatex Stone Carpet gives the longevity of ceramic tiles and the look of carpet”

Addatex Stone Carpet is a mix of natural or synthetic aggregates, bound in a clear epoxy resin providing a highly decorative and versatile floor finish for showrooms, offices, museums, receptions, or even your living room.

Addatex Stone Carpet offers many advantages over traditional surfaces, when walked on in bare feet it feels pleasantly warm and has a soft sensation similar to carpet. The resistance to wear however will be similar to ceramic tiles.

Addatex Stone Carpet can also help reduce noise from pedestrian trafficking. While the open matrix allows dust to fall into the open pores, preventing dust "fly up" when trafficked yet can be easily removed with a vacuum cleaner. Spillages can be cleaned with a wet and dry vacuum cleaner.

The air trapped within the structure of the Addatex Stone Carpet is around ambient air temperature, so a stone carpet floor will always feel pleasantly comfortable within a few degrees of room temperature. If your room temperature is around 20°C the stone carpet will have an average temperature of approx 14 to 15°C.

Underfloor heating can also be used to create a warm floor throughout the year.

“Addagrip DECO is a contemporary bound aggregate system with an easily cleaned sealed surface”

DECO resin based surfaces provide a 2-3mm decorative coloured quartz surface that have been used extensively throughout Scandinavia and Iceland for many years.

As part of our continuing development and our links with a Norwegian resin formulator/manufacturer we are delighted to offer the ADDAGRIP DECO surface to the UK market. Suitable for a variety of locations including supermarkets, shops, offices and display showrooms, ADDAGRIP DECO will provide you with an attractive and hard wearing surface.
