

Permeable Driveways (SuDS) Minimum Dig Typical base build up suitable for light vehicle use

Recommended Specification for Terrabase Rustic Surfacing

Surface Course

Hand applied and trowelled to a smooth finish by approved installers

Terrabase Addagrip

Applied by approved installers

Terrabase Geofabric

Applied by approved installers

Regulating Layer

Laid by others

Sub-base

Laid by others in well compacted layers to a minimum fall of 1.5% (1 in 66)

Optional membrane

Sub-grade

Note:

A suitable steel, wood, brick, stone or aluminium edging should be provided to ensure a neat edge detail but depending on project requirements the Geofabric can be used as an edging. The maximum tolerance of the base should not exceed 3mm under a 1m straight edge. If existing sub-grade is silty, it may be necessary to stabilise it or partially replace it with sub base/granular capping layer. If there is danger of ponding, the sub base should be laid to falls. Total sub base depth will be dictated by loading and attenuation requirements.
