Experts in Resin Since 1980

The First BBA Certified Range of Premium  
Resin Bound Surfacing Systems

## addaset®

Our original BBA-certified resin bound system offers a smooth, durable and porous finish using high-quality natural aggregates. Bound with UV-stable resin, it delivers a low-maintenance surface that resists cracking, fading and loose stone—ideal for driveways, pathways and public spaces. Installed by our approved contractors, it supports SuDS compliance and is backed by up to a 25-year guarantee.

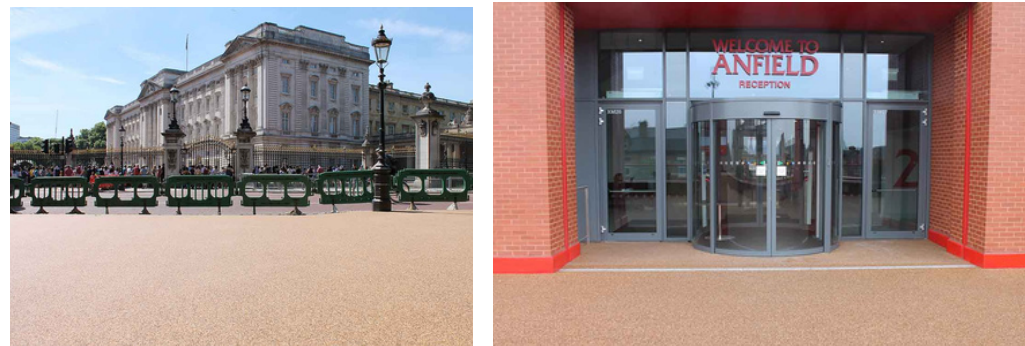

## addaset ecolife®

Addaset Ecolife offers the same strength, permeability and low-maintenance performance as our original system, with the added benefit of incorporating a minimum 25% recycled content. UV-stable and SuDS-compliant, it's a sustainable choice for driveways, paths and public spaces—installed by our approved contractor network it has a life expectancy of up to 25-years.

## addaset amber®

Offering a more economical alternative within our BBA-certified range, this surface uses a broader stone blend to create a coarser, textured finish. Retaining the UV stability, permeability & durability expected across our systems, making it well-suited to large-scale commercial spaces. Fully SuDS-compliant when laid over a porous base and supported by up to a 25-year guarantee through our approved installers.

## Why should I use a BBA approved system?

British Agrément Certificates provide reassurance to users, designers, insurers and regulators and are recognised throughout The UK by architects, engineers and building control personnel as a mark of quality, safety and reliability.

At Addagrip, we not only adhere to this quality, but we actually helped The BBA develop this certification.

## terrabase®

Looking for a fully porous finish with 'minimum/no-dig' options to avoid using asphalt or concrete?

Our patented Terrabase can be topped with one of our standard Resin Bound blends from the BBA range.
